

**Abstracts from the 5th Visual Science of Art Conference
(VSAC)
Berlin, Germany, August 25th–27th 2017**

CONTENTS

Editorial

Bridging art and the visual sciences
Claus-Christian Carbon and Joerg Fingerhut 347

Keynotes

1. Art and wonder
Jesse Prinz 353

2. Aesthetics and the brain
Irving Biederman 353

Talks

Symposium: Seeing as image thinking

1. The silence of the image and the symbolusion
Tom Lambeens and Sofie Gielis 356

2. The horizon, an ambiguous way of thinking and viewing
Patrick Ceysens 356

3. Seeing without knowing in the 2.5-dimensional
Griet Moors 357

Talk session: How universal are aesthetics?

4. What is universal in aesthetic preference?
Branka Spehar and Richard Taylor 357

5. Aesthetic appreciation of cultural artifacts engages additional processes beyond a core domain-general system <i>Edward Vessel, Ilkay Isik, Amy Belfi, Jonathan Stahl and Gabrielle Starr</i>	358
6. Cultural differences in the aesthetic appeal of complexity in art <i>Joerg Fingerhut, Aenne A. Brielmann, Antónia Reindl and Jesse Prinz</i>	359
7. Symmetry preferences in Britain and Egypt <i>Marco Bertamini, Carole Bode and Mai Salah Helmy</i>	359
 <i>Symposium: Space of the mind's eye</i>	
8. Topology of space in the picture frame <i>Jan Koenderink and Andrea van Doorn</i>	360
9. Image and imagination: How figure scale in medieval painting reflects visual perception <i>Nicole Ruta, Alistair Burleigh and Robert Pepperell</i>	360
10. Framing the virtual – Creating space with time <i>Margit Lukács and Persijn Broersen</i>	361
11. Synoptic pictorial space <i>Maarten Wijntjes</i>	361
 <i>Talk session: Physiology and art</i>	
12. Mobile eye tracking to explore interaction with abstract paintings – A large scale experiment in the Royal Academy <i>Johannes M. Zanker, Jasmina Stevanov, Jade Jackson and Tim Holmes</i>	362
13. Where To Fixate (WTF): Oculomotor strategies in perception of contemporary paintings <i>Joanna Ganczarek and Karolina Pietras</i>	363
14. Preference and approach response for smooth curvature: An ERP study <i>Letizia Palumbo, Neil Harrison and Marco Bertamini</i>	363
15. The usefulness of mobile EEG equipment in analysis and documentation of performance art <i>Łukasz Kędziora</i>	364
 <i>Talk session: Mixed session</i>	
16. Beauty requires thought <i>Denis Pelli and Aenne A. Brielmann</i>	364
17. True art experience: What we can learn from ecological contexts, settings, and material <i>Claus-Christian Carbon</i>	365

18. Auto-ritratto: Self-portraiture, dyadic consciousness and the auto-regressive Eigenfunction – beyond Gödel, Escher and Bach
Christopher Tyler 366
19. On the edge of attractive chaos in a series of semi-abstract photographs by Dominique Genin
Nathalie Vissers, Pieter Moors, Valeria Guiot, Sarah Delcourt, Dominique Genin and Johan Wagemans 366
20. Composing abstract images – Differences between artists and lay people
Philip Letsch and Gregor Uwe Hayn-Leichsenring 367

Talk session: The role of statistical and principal properties

21. Differences in statistical image properties between traditional art, Bad Art and abstract art
Christoph Redies and Anselm Brachmann 368
22. Visual statistics of large samples of Western artworks
George Mather 368
23. Exploring aesthetic experiences of females: Affect-related traits predict complexity and arousal responses to music and affective pictures
Manuela Marin and Helmut Leder 369
24. Experiencing (dis)order: Simplicity and order might be appealing but interesting patterns are those that diverge from an obvious order
Claudia Muth, Claus-Christian Carbon and Gesche Westphal-Fitch 370

Posters

- Art and technology at work: Introducing MuseuMedia, the app for navigating art in small museums
Rossana Actis-Grosso, Giustina Sacco and Daniele Zavagno 371
- Space as time: Heterotopias in Renaissance paintings of the annunciation
Michael Adams 371
- Beyond boundaries: Artistic interventions in object recognition
Sal Anderson 372
- Affective responses to regular / predictable / irregular curves measured by using a wearable vital sensor
Akira Asano, Hung An Nguyen, Chie Muraki Asano, Katsunori Okajima, Mikiko Kawasumi, Hirokazu Tanaka and Yasutaka Hatakeyama 373

Distancing art from philosophy <i>Charles Beasley</i>	373
Preferences towards angular and curved shapes: The effects of frame and instruction <i>Olesya Blazhenkova</i>	374
Pleasure as self-maintaining motivation – A Kant-based approach <i>Katharina Blühm</i>	374
Left–Right position in moving images: An analysis of face orientation, face position, and movement direction in eight action films <i>Carole Bode, Marco Bertamini and Mai Salah Helmy</i>	375
Expertise in histology alters taste in art <i>Antonia Böthig and Gregor Uwe Hayn-Leichsenring</i>	376
The Golden Ratio is not always preferred in art <i>Aenne A. Brielmann, Joerg Fingerhut and Jesse Prinz</i>	376
Eye centring in selfies posted on Instagram <i>Nicola Bruno and Marco Bertamini</i>	377
The role of embodiment and image characteristics in the evaluation of graffiti <i>Rebecca Chamberlain, Caitlin Mullin, Johan Wagemans, Daniel Berio, Frederic Fol Leymarie, Komalta Mirani and Guido Orgs</i>	377
A new conception and measure of visual aesthetic sensitivity <i>Guido B. Corradi, Juan Ramón Barrada and Marcos Nadal</i>	378
E-motions: Whole figures are more than the sum of face and body <i>Olga Daneyko, Rossana Actis-Grosso and Daniele Zavagno</i>	378
Visual recipes for convincing representations of grapes in Dutch Golden Age paintings <i>Francesca Di Cicco, Maarten W. A. Wijntjes, Jeroen Stumpel, Joris Dik and Sylvia C. Pont</i>	379
Making sense by drawing. A field study with experimental physicists on the epistemic function of collaborative sketching activities <i>Judith Dobler</i>	379
Pointillist transitions <i>Andrea van Doorn and Jan Koenderink</i>	380
Light art as a pedagogical tool for teaching the science of colour perception <i>Daniel Garside</i>	381

Individual differences in aesthetic judgments of symmetry <i>Andreas Gartus, Helene Plasser and Helmut Leder</i>	381
What is in a grid? Perceived flatness and aesthetic appeal in variants of Mondrian compositions <i>Barbara Gillam and Branka Spehar</i>	382
The aesthetic self effect <i>Javier Gomez-Lavin, Joerg Fingerhut and Jesse Prinz</i>	382
Colour associations of the Russian people <i>Yulia A. Griber and Ivar Jung</i>	383
Aesthetic experience, neuroscience and cognitive science <i>Nicole Hall</i>	384
The factors affecting preferred physical size of high-resoluntional moving images <i>Masamitsu Harasawa, Yasuhito Sawahata and Kazuteru Komine</i>	384
The influence of graphic long-term memories on face depiction accuracy is attenuated for trained versus untrained drawers <i>Neil Harrison and Richard Russell</i>	385
The researcher’s artwork – An ontological problem <i>Gregor Uwe Hayn-Leichsenring</i>	385
The picture lies in the eye of the beholder. A qualitative case study on motifs of ‘photographic reception’ <i>Lea Hilsemer</i>	386
Does ‘pictorial balance’ have different meanings depending on the picture type? <i>Ronald Hübner and Martin Fillinger</i>	387
Static and depicted bodies in art <i>Leonardo Impett and Sabine Süssstrunk</i>	387
Exploring network connectivity during visual aesthetic experiences <i>Ilkay Isik and Edward Vessel</i>	388
Cross cultural differences in creativity <i>Tal Ivancovsky, Jenny Kurman and Simone Shamay-Tsoory</i>	388
Aesthetic perception and attribution of personality traits of patients with dysgnathia before and after orthodontic surgery <i>Reinhold Jagsch and Klaus Sinko</i>	389

Arousal transfer effects of environmental scenes on self-reported arousal and pleasantness in response to representational paintings <i>Nina Jahrmann, Helmut Leder and Manuela Marin</i>	390
Valence, arousal and cognitive evaluation (VACe) model of aesthetic experience of artworks <i>Dragan Jankovic</i>	390
Embodying movies: The influence of social context on emotional film reception <i>Laura Kaltwasser, Martina Ardizzi, Marta Calib, Luca Settembrino, Joerg Fingerhut, Michael Pauen and Vittorio Gallese</i>	391
Depth perception in AR art <i>Jason Kao</i>	392
Distressing: Delight between boredom and confusion <i>Jan Koenderink and Andrea van Doorn</i>	392
Aesthetic experience of contemporary dance choreographies: The influence of the choreographer’s style and observers’ identification with story <i>Ágota Vitkay Kucsera and Maja S. Vukadinović</i>	393
Scrooge McDuck & the Big Bang – On flawed and limping images <i>Tom Lambeens and Sofie Gielis</i>	393
Mona Lisa’s happiness is by 35% in the eye of the beholder <i>Emanuela Liaci, Andres Fisher, Markus Heinrichs, Ludger Tebartz van Elst and Jürgen Kornmeier</i>	394
Listening to paintings <i>Rob van Lier and Arno Koning</i>	395
The importance of art in medical and training environments <i>Steven Ligthert and Bianca Huurneman</i>	395
Mannerism and fractals – A mathematical-visual intuition <i>Vasco Medeiros</i>	396
Images of Blacks, Orientals, Indians: Cross-cultural perspectives in 19 th century European and American art <i>Dalila Meenen</i>	397
Data sublime and the readable sky <i>Romi Mikulinsky</i>	397
Shooting angle and the miniature effect in photography <i>Kayo Miura</i>	398

Study on criteria for artistic activities by people with disabilities – Development of criteria lists by literature survey <i>Tsukasa Muraya and Yasuyuki Hirai</i>	398
Live transmission as drawing practice <i>Morgan O’Hara</i>	399
Aesthetic perception of movement synchrony in live dance performances <i>Guido Orgs, Staci Vicary, Matthias Sperling, Jorina von Zimmermann and Daniel Richardson</i>	400
Let’s talk about gender: Linking aesthetic preferences to assertiveness and nurturance <i>Stefan A. Ortlieb, Uwe C. Fischer, Anna Moosmann and Claus-Christian Carbon</i>	400
Artwork as sensory space <i>Ebru Ozsecen</i>	401
The electrophysiological and perceptual effects of whole-body OVO colour-immersion <i>Patrizio Paoletti, Joseph Glicksohn, Stefano Lasaponara, Federica Mauro, Tal Dotan Ben-Soussan</i>	402
Sharing pain and grief online: A project on digital humanities to study the role of the image as an element of mediation, destigmatization, connection and co-presence <i>Rebeca Pardo and Montse Morcate</i>	402
Painted light: What 10000 pictures reveal about the source of light across ten centuries <i>Alexander Pastukhov and Claus-Christian Carbon</i>	403
The role of mental imagery ability in Fine Arts, Psychology and Engineering <i>María José Pérez-Fabello and Fatima Maria Felisberti</i>	404
The relation of graph visualization and aesthetics: An empirical approach <i>Marius Hans Raab, Hannes Waechter, Tamara Mchedlidze and Claus-Christian Carbon</i>	404
‘Temporal metaphors’: Visual-temporal structures and metaphorical-cognitive processes in the video work ‘quad’ by Samuel Beckett <i>Ifat Reshef</i>	405

Red versus blue, gaudy versus bleached: Toward the influence of background colour on memory and aesthetic judgment <i>Bettina Rolke and Elisabeth Hein</i>	406
Wearing hyper-realistic masks: A strong manipulation for embodied cognition <i>Jet Sanders, Ailish Byrne, Yoshiyuki Ueda, Atsuko Tominaga, Kazusa Minemoto, Sakiko Yoshikawa and Rob Jenkins</i>	406
Visual perception of a lattice of dots surrounded by a tilted frame: A Gestalt approach <i>Arefe Sarami and Reza Afhami</i>	407
Shared meaning in representational and abstract artworks <i>Astrid Schepman, Paul Rodway and Julie Kirkham</i>	408
Interdisciplinary arts and sciences: Reversal and multiplication of spatial articulation in Miao Xiaochun's 3D environments <i>Isabel Seliger</i>	408
Perception of expressive body movements by individuals with autism spectrum disorder <i>Vassilis Sevdalis, Jennifer Mayer, Kathy Filer, Peter Keller and Pamela Heaton</i>	409
What is art good for? The socio-epistemic value of art <i>Aleksandra Sherman and Clair Morrissey</i>	410
Mona Lisa's smiles in Leonardo's drawings <i>Alessandro Soranzo, Olga Danyeko and Daniele Zavagno</i>	410
Introducing the Vaiak: A new and validated way to measure art knowledge and art interest <i>Eva Specker, Michael Forster, Hanna Brinkmann, Jane Boddy, Raphael Rosenberg and Helmut Leder</i>	411
Exploring Mondrian compositions in three-dimensional space – from design to virtual implementation <i>Jasmina Stevanov and Johannes Zanker</i>	411
On the origins of inverse perspective <i>Jeroen Stumpel</i>	412
Seeing with the mind's eye. On the art history and aesthetics of 'blind art' <i>Tobias Teutenberg</i>	412

Anticipating popularity of photographs on Instagram. How balance-related low-level features of photographs predict Instagram Likes <i>Katja Thömmes</i>	413
Eye movements in the spectatorship of portraits <i>Tobiasz Trawinski, Natalie Mestry, Beth Harland, Simon P. Liversedge and Nick Donnelly</i>	414
Do the perceived balance, harmony, and liking of original Mondrian paintings differ from Mondrian-like variants? <i>Sandra Utz and Claus-Christian Carbon</i>	414
Both stimulus and person contribute to preferences for neatly organized compositions <i>Eline Van Geert and Johan Wagemans</i>	415
The role of curvature in the appreciation of visual artworks <i>Javier Vañó, Robert Pepperell, Enric Munar, Jaume Rosselló and Marcos Nadal</i>	415
Disambiguation of ambiguous figures in peripheral vision by prior knowledge <i>Tilde Van Uytven, Erik Myin and Bilge Sayim</i>	416
Empirical methods in performance art <i>Nicole Vennemann</i>	416
Illusory planes in Fred Sandback’s sculpture <i>Ian Verstegen</i>	417
Equivalent preferences for fractal scaling characteristics in vision and touch <i>Catherine Viengkham, Zoey Isherwood and Branka Spehar</i>	417
Contemporary dance choreographies: Relationship between observers’ empathy and aesthetic experience <i>Maja S. Vukadinović and Slobodan Marković</i>	418
On the edge of attractive chaos in a series of semi-abstract paintings by Lou Bielen <i>Johan Wagemans, Sarah Delcourt, Lou Bielen and Pieter Moors</i>	419
Flower preference: Visual attributes governing the appeal of gerberas <i>Tamara Watson</i>	419

Consumer expectations for vegetables with atypical colours: The case of carrots <i>Theresa Wehrle, Rick N. J. Schifferstein and Claus-Christian Carbon</i>	420
Implicit and explicit visual symmetry preference in art experts compared to laypeople <i>Hanna Weichselbaum, Helmut Leder and Ulrich Ansorge</i>	420
It's all about colour. Rendering reality in Dutch oil painting about 1700 <i>Lisa Wiersma</i>	421
Visual art preferences are predicted by preferences for the depicted objects <i>Emily Winfield, Carmel Levitan and Aleksandra Sherman</i>	421
Illusory colour depth based on the interaction between fluorescent and conventional colours <i>Stefanie De Winter, Pieter Moors, Hilde Van Gelder and Johan Wagemans</i>	422
Cultural identity matters: Aesthetic appraisals of Eastern and Western landscapes as observed with neural responses and behavioural measures <i>Taoxi Yang, Sarita Silveira, Marco Paolini, Ernst Pöppel, Tilmann Sander and Yan Bao</i>	423
Painters' quest in vision scientists' tongue <i>Jihyun Yeonan-Kim</i>	423
Pieter Paul Rubens and the Poggendorff illusion <i>Daniele Zavagno, Natale Stucchi and Olga Daneyko</i>	424
Depicted material categories in online museum collections <i>Mitchell van Zuijlen, Sylvia Pont and Maarten Wijntjes</i>	424

Editorial: Bridging art and the visual sciences

The 117 short texts included in this special issue of *Art & Perception* comprise the abstracts of the keynotes, talks and posters that have been selected for presentation at the 2017 Visual Science of Art Conference (VSAC) in Berlin.¹ You will find the abstracts of the two keynotes, Jesse Prinz (CUNY) and Irving Biederman (USC), at the beginning of this issue followed by the peer reviewed contributions. Talks, as well as contributions to symposia, are printed in the order they were presented at the conference. By retaining this structure in the proceedings, we aimed to preserve the anticipated coherence that connected the presentations as we saw it while planning the conference. Some talks were part of symposia that especially aimed at combining artistic perspectives with those of researchers from the humanities and the psychological sciences (talks 1–3, 8–11). The peer reviewed talks were clustered around topics that have been of special interest to the community of researchers in the sciences of the arts. Such were, among others, aesthetic universal and cross-cultural differences (talks 4–7), the range of physiological measures in the aesthetic sciences (talks 12–15), or visual statistics of art images (talks 21–22). Poster abstracts are printed in a third section in alphabetical order. (For a full thematically ordered list of sessions – also including the posters – please consult <https://www.vsac2017.org/>).

For the first time of the VSAC the co-organizers belong to two adjacent disciplines, one being psychology (Claus-Christian Carbon, Bamberg) the other philosophy (Joerg Fingerhut, Berlin), and both are committed to research projects that span across disciplinary boundaries. We encouraged and actively selected submissions that promised a broadening of the topics to be addressed at the VSAC 2017. Many experiments in neuroaesthetics, to take one example, focus on immediate sensory responses to artworks and simple evaluative states. This focus is important when it comes to understanding our interaction with artworks, but it often omits questions regarding art that have concerned psychologists, philosophers, art historians, sociologists, and others

1 Established in 2012 by Baingio Pinna in Alghero/Italy, the Visual Science of Art Conference (VSAC) aims to better connect the communities of scientists and artists in order to deepen our understanding of art and aesthetic phenomena. The VSAC over the years has proven to be an ideal venue to engage, debate and collaborate on all topics associated with the perception of artworks. From its beginnings, the VSAC has been organized as a satellite conference of the ECVF (European Conference on Visual Perception), the leading European conference on visual science. This year the VSAC was held in Berlin/Germany from August 25th–27th at the Berlin School of Mind and Brain at the Humboldt-Universität zu Berlin and the adjacent Campus of Charité Mitte. Around 250 participants joined the conference this year.

who recognize that art is an intellectually engaged, historically situated, and culturally varied phenomenon. In choosing the contributions among the positively reviewed submissions for this year's conference we therefore placed additional focus on approaches that deal with the appreciation of artworks that goes beyond simple preference and liking judgments. Several talks and posters therefore address the complex and layered aesthetic experience art enables. Others directly focus on the long underappreciated question of what underlies our evaluation and appreciation of art *as* art. These two emphases in new research in the visual sciences of the arts has made it necessary to include contributions from a wide range of topics and disciplinary perspectives spanning from image statistics, neuroscientific, behavioral, philosophical, phenomenological, and computational approaches, to those of the artists themselves.

The emerging interest in connecting art and vision science is well demonstrated by the wide variety of subjects and methods covered in the abstracts in this issue. The wide international appeal is evident in the diversity of countries represented in the conference (28 countries from six continents). In relation to previous years, a shift towards greater gender balance was also recognizable at the conference. While both keynotes were male, the contributors listed for talks presented at the conference were half female and male (27 female/27 male), with a slight prevalence for male first authors and presenters (12 female/15 male; not controlled for gender self-identification of the participants).

What unifies most of the contributions in this volume is the conviction that works of art and aesthetic engagement are observable entities, and that they therefore can in principle be studied using empirical methods. The two phenomena, artistic objects and aesthetic experiences, are two *relata* that cannot be studied in isolation without missing the relevant phenomenon. Yet one also should acknowledge that studying each *relatum* might require expertise in very different fields and that certain approaches swing either more to the object side or the experience side of the relation.

Art objects, on the one hand, can be interpreted as the level of main interest, independent of their context, the specific ways of inspecting them, or elaboration effects. Approaches that focus on the object side identify object-inherent qualities and analyze them, bringing a wealth of methodological accounts to the field. Recently, statistical regularities in artworks were revealed, for instance by analyzing the Fourier spatial frequency power or by calculating different measures of complexity, entropy or order. There are undeniable first impressions to artworks which guide beholders in their subsequent inspection behaviour, so such accounts might be very powerful in predicting such first moves towards to or away from specific works. Yet such analyses can also be brought to bear to identify properties in artworks that differ from one specific historical period to another, or between different cultures.

On the other hand, when it comes to the experience of art and its evaluation *as* art, psychology, neuroscience, and philosophy often provide competing descriptions of the relevant phenomena. This sometimes makes it challenging to identify whether the very phenomena under scrutiny actually overlap. Philosophers and artists alike often emphasize that subjective experience or artistic engagement resist generalization (leaning on the discussion whether subjective experience is assessable by a 3rd person perspective at all). This is a topic that is highlighted even more by the individualism prevalent to the art practice or the precariousness and variation in intense individual engagements with particular artworks. Empirically oriented philosophy, psychology and neuroscience commit to the very possibility that such phenomena are objectifiable to some extent, i.e. that there are structural component features of our engagement with the arts that can be identified, and that certain aesthetic responses systematically relate to specific properties of artworks (or to changes in the available semantic or contextual information regarding the artwork). Both perspectives on the experience-side of the field have been present at this year's conference.

Awareness of the need to conduct research that gives equal weight to both *relata* (visual artefacts and aesthetic experience) as well as to the specific pitfalls of a visual science of the arts has been a running topic throughout the conference and in the discussions after the talks, the sessions and the many productive breaks provided by the conference schedule.

In order to bring our actual engagement with works of art to the fore, VSAC has always aimed to incorporate artworks themselves into the conference. This has been realized this year by talks and posters that not only focused on general claims regarding our aesthetic responses but rather highlighted aesthetic engagements with the work of a specific artist (or a series of artworks of one artists) or a specific art period, thereby bringing psychological studies closer to the interest of art critics, art historians and artists. Yet this incorporation has especially been achieved by the exhibition of a series of artworks of local and international artists at the “VSAC Art Night” at “ACUD macht neu!” that has been curated by Gina Eickers, to whom we would like to express our deep gratitude. We unfortunately do not have space to include reproductions and descriptions of all the presented works in this volume. A list of the contributing artists has to serve as a stand-in: Charlotte Broecker, Persijn Broersen & Margit Lukács, Philip Crawford, Gina Eickers, Liat Grayver, Shelley James, Sebastian Loerscher, Morgan O'Hara, Robert Pepperell, Miao Xiaochun.

Additionally we had two visual artists directly “protocolling” the conference in very different ways. Both artists also exhibited their work at the art night. The LIVE DRAWINGS by Morgan O'Hara, who also contributed a poster to the conference, captured the movements of the speakers during their

talk performances. Below you can see her renderings of the presentation of the two organizers (Figs 1 and 2).

Graphic artist Sebastian Loerscher additionally graphically engaged with the contributions of this conference, while also focusing on the scientific insights and thematic unfolding of the talks. We chose to include his drawings of the two keynotes as well as of the poster sessions in this volume (see sections: KEYNOTES, Figs 3 and 4, and POSTERS, Figs 5 and 6).

We hope that the 5th VSAC in Berlin as well as this publication will further inspire the vivid and fruitful exchange between vision science and art. In publishing its proceedings for the very first time in a journal, we hope to enrich the field beyond those that attended the conference in Berlin. At the same time, we are very well aware that short abstracts in many cases will not capture the actual contributions, especially with respect to approaches in which disciplinary boundaries are crossed and more complex questions are raised. We want to end by encouraging researchers and practitioners in the field to submit their work to the next installment of VSAC in 2018 which will take place in Trieste/Italy and to which we are very much looking forward.

Figure 1. *Live Transmission*, movement of the hands of Claus-Christian Carbon during his opening remarks, 25.8.2017. By Morgan O'Hara, 2017.

Figure 2. *Live Transmission*, movement of the hands of Joerg Fingerhut during his talk, 25.8.2017. By Morgan O’Hara, 2017.

We would like to thank the members of the Conference Committee who contributed their time to help us review the talks and posters: Rossana Actis-Grosso, Marco Bertamini, Nicola Bruno, Andrea van Doorn, Uwe Fischer, Akiyoshi Kitaoka, Jan Koenderink, Ute Leonards, Rob van Lier, Manuela Marin, Slobodan Marković, George Mather, Claudia Muth, Marcos Nadal, Stefan Ortlieb, Galina Paramei, Alexander Pastukhov, Robert Pepperell, Sylvia Pont, Ana Radonjic, Bilge Sayim, Alessandro Soranzo, Branka Spehar, Christopher Tyler, Sandra Utz, Johan Wagemans, Maarten Wijntjes, and Daniele Zavagno.

We also would like to thank the *Research Group EPÆG* (Ergonomics, Psychological Æsthetics, Gestalt), Bamberg, as well as the *Einstein Foundation Berlin* for their generous support of the conference and the publication of the proceedings. Sandra Utz, Claudia Muth, Uwe C. Fischer (Department of General Psychology and Methodology, University of Bamberg) have helped tremendously in comprising the abstracts for this special issue, George Neish (Berlin School of Mind and Brain, Humboldt-Universität zu Berlin) was a great help in the final editing and proofreading process of this volume. We are also very grateful for all the help we had in planning the conference (Felix

Binder, Gina Eickers, Coco Kühnapfel, Claudia Muth, Alexander Pastukhov, Marius Raab, and Sandra Utz), and would like to express our gratitude to the numerous helpers during the conference!

Finally, we would like to thank Brill Publishing for producing this volume, and for doing it on such a short timeline. It has been a pleasure working with their team.
